The Problem

The "Last Meter" Problem

Meet Sarah

She has a broken leg and is ready to leave the hospital. But she can't. Why?

The Conflict

She lives alone. She can't clean her floors. She can't walk her dog.

The Consequence

Because of a “Physical Dignity Gap" in support, she stays in the hospital costing €1,000/day, blocking a bed for someone else. And she cannot go out for weeks.

The Macro Crisis

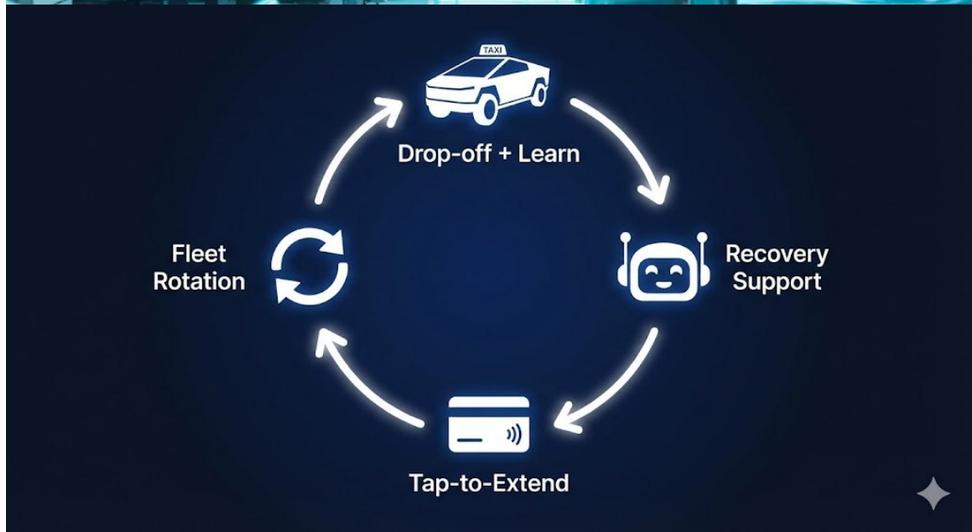

The Dignity Gap of Caring

Sarah is not alone. This is a systemic failure.

€1,000	25%	2050
Daily hospital bed cost	**Aging population**	**Climate deadline**
Blocking beds due to lack of home support	Rising demand for physical care services	Systems failing due to execution gaps “Treat me right”

The Insight: Climate plans and Healthcare systems are failing not because of bad policy, but because of a lack of physical execution in the "Last Meter.“ Society 5.0 pressure to Tech community is increasing due job losses and AI overlording.

Our Solution

The Product – Recovery Rental

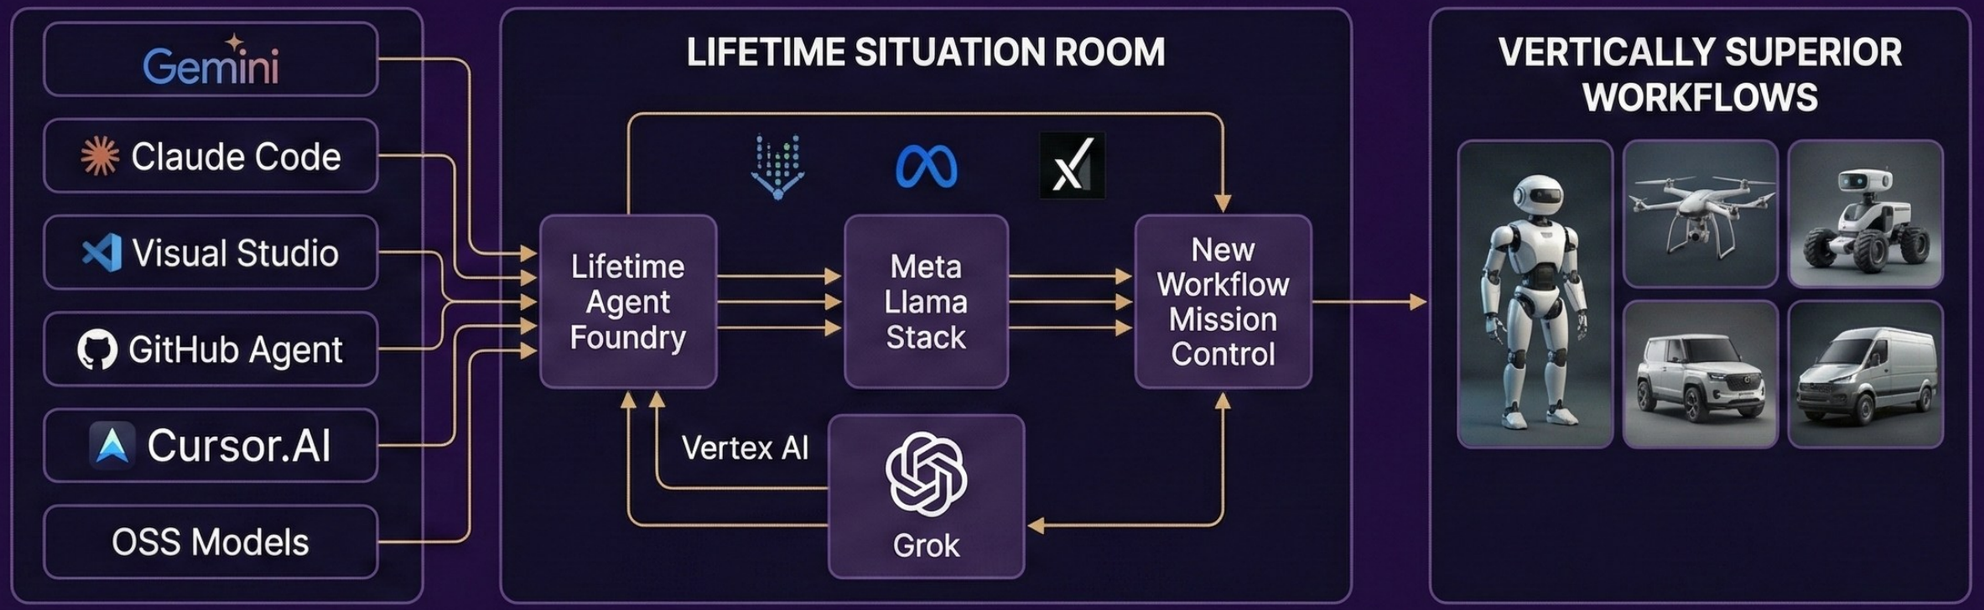

We don’t sell hardware; we sell **physical autonomy on demand**. Our entry wedge is the **'Recovery Rental'**. It’s a pure shared economy model. Hospitals or families book a **6-week package**. We drop the robot off, it handles the dirty work, and Sarah heals. When she needs more time? She just **taps her Visa card right on the robot**. Instant extension. Zero friction for the user, **maximum utilization** for our fleet 24/7 365 days a year.

The Anatomy of Execution

We built a full organism to solve the gap.

THE BRAIN
(DWS IQ Platform, AI Models & Foundry)

THE BODY
(Firehorse, Agentic Software, Workflow Control)

THE HANDS
(Lifetime Fleet: Robots, Drones, Vehicles)

Result: One integrated shared economy loop owned by Lifetime World.

The ‘Recovery Rental’ Model (The Wedge)

How we enter the market.

01

THE PRODUCT

A 6-week “Recovery Rental” package.

02

THE OFFER

We deploy a robot to the home to handle the "dirty work" (cleaning, logistics, pet care) so the patient can heal.

03

BENEFIT & THE HOOK

Cheaper than a hospital bed, better for the patient. Hook: Sell the Robot.

Validation

TRACTION - WE ARE ALREADY DOING THIS

This isn't just a theory. The 'Brain' and 'Body' are live.

MONTHLY RECURRING REVENUE

Proven business model

ASSISTED RIDES PER DAY

Active daily operations

VALIDATED ARCHITECTURE

Cloud OpEx

PARTNERS: VALIDATED INTEGRATIONS WITH UBER AND KELA.

The Vision – 2050 Climate + Society 5.0 Goals Met 2026

The Future

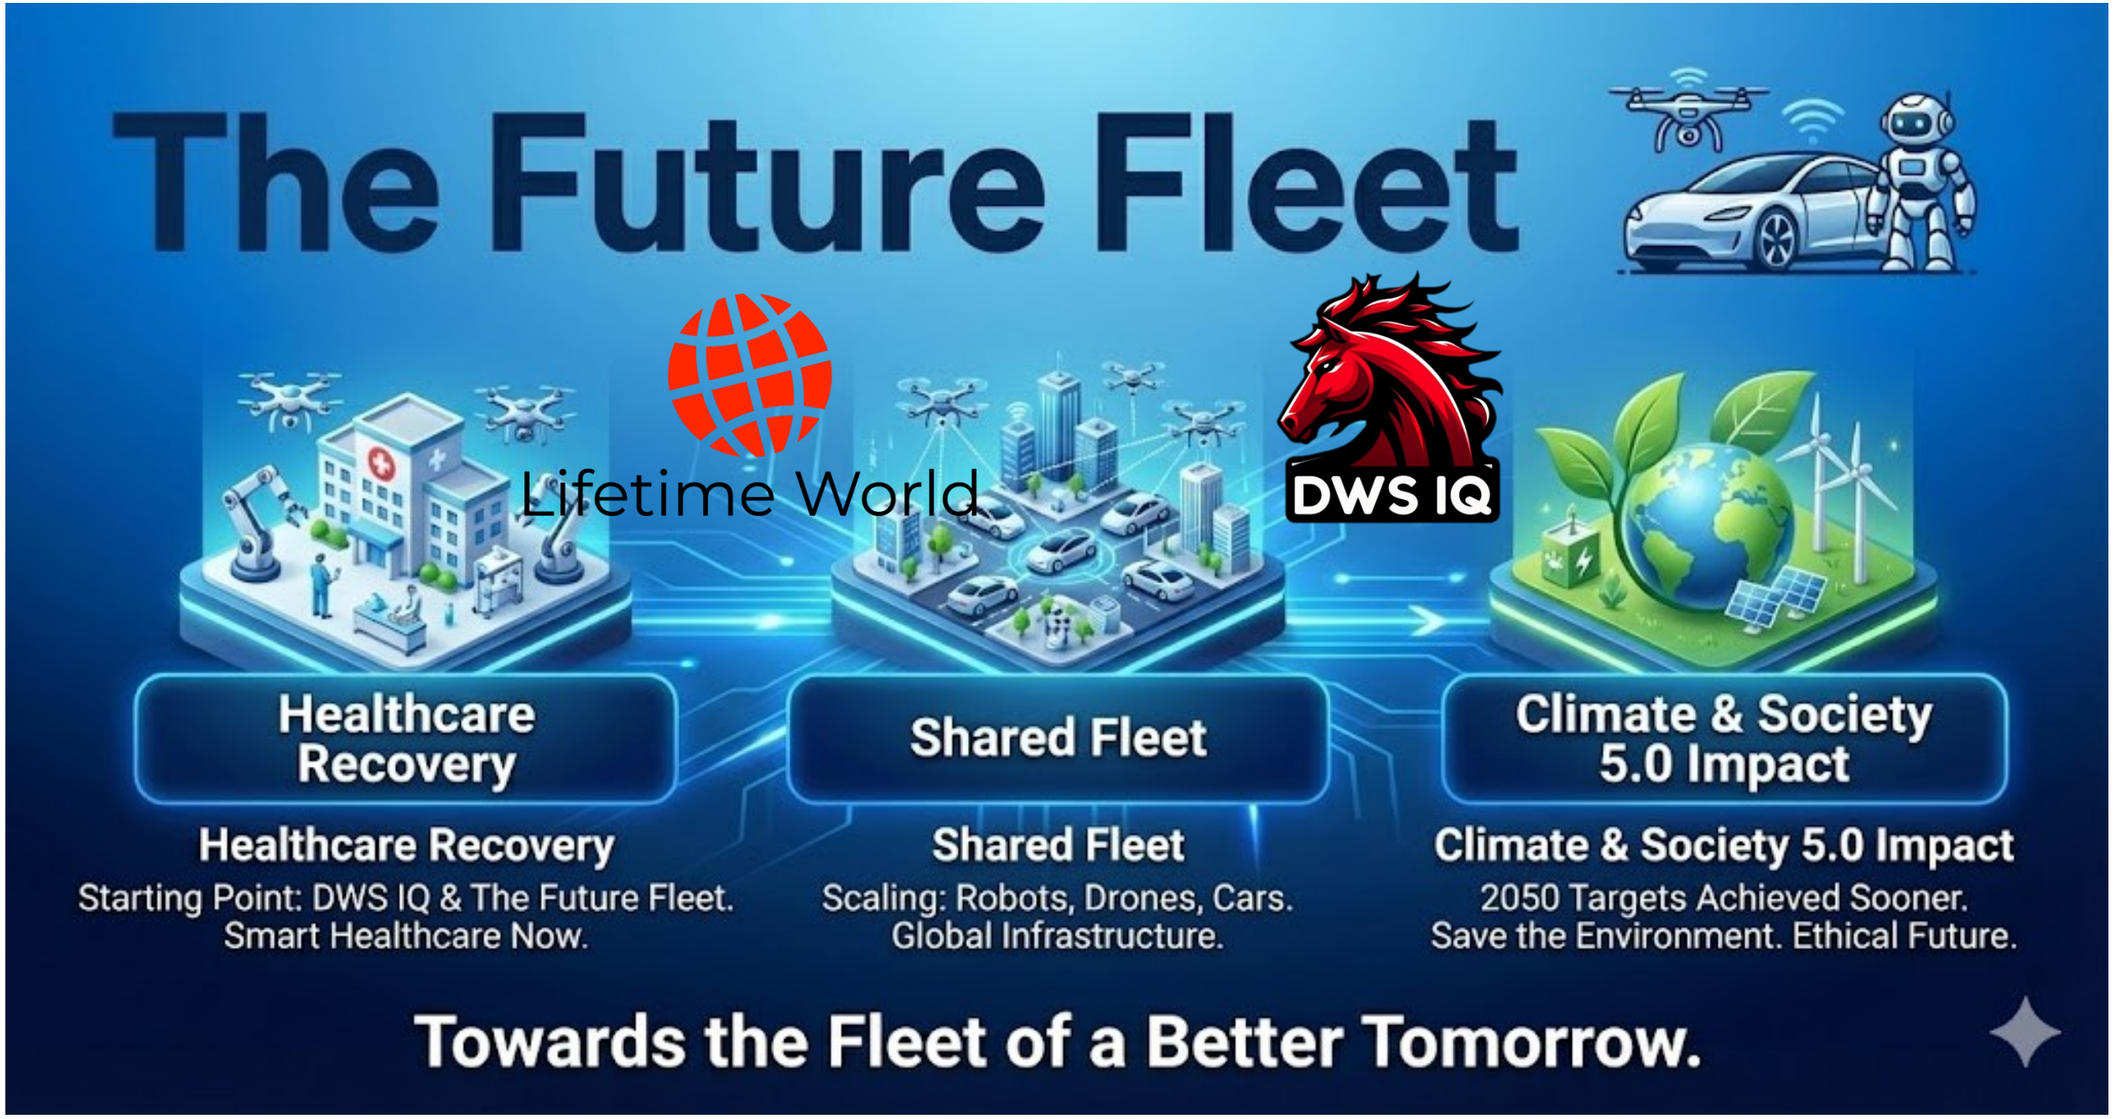

Building the Lifetime Fleet

Lifetime Fleet
Cars, Drones, Robots

We start with healthcare recovery, but we are building the "Lifetime Fleet."

Lifetime World

The Ask - Expanding the Fleet

We have the Software and the Contracts. Now we need the 'Hands.'

Raising €150k

Seed funding round

Credits: Google Cloud, AWS, Groq, GitHub Enterprise

2

Use of Funds

Purchasing the first 5 Service Robots for the "Recovery Rental" pilot to unlock the hospital discharge bottleneck.
