Executive Summary

Lifetime Oy is building **DWS IQ 6**, an AI orchestration platform industrial climate OS for 16 most EU-regulated industries. As an **official InvestEU Project (INPO-20254383)**, we serve logistics (Uber Taksi Helsinki, Bolt, Kela) and are expanding into Nordic construction (NCC, T2H). Fit for 55 is an EU level program for carbon reduction touching every company 2028. Our hybrid architecture combines on-premises model training for GDPR/EU AI Act compliance with Google Cloud for elastic scaling.

Fit for 55 means Fit for 55. DWS IQ 6 is built for real outcomes, not minimum compliance forms. Our EU-hosted 800B-parameter climate model runs on Google Cloud and, together with regulation-specialised Firehorse Apps and Tools, lets large construction and industrial groups enforce stricter, future-proof Fit for 55 and CSRD standards across their entire value chain. This creates a repeatable, high-consumption reference workload for Google Cloud in 16 EU-regulated industries.

Enterprise Customers use DWS IQ Connectors like Google Workspace Connectors to safely plug in your enterprise-grade 70B models and your entire tool stack – documents, calendars, workflows, data sources and reporting systems – so every new integration grows your competitive advantage instead of adding complexity.

Why Google Cloud?

Google Cloud is central to our scale-up strategy. We currently run production workloads on Cloud Run and store secrets in Secret Manager. Our next phase requires A3 GPU instances (H100) for training enterprise-grade models that we then deploy to edge devices for data-sovereign inference. Google Cloud's EU data residency options make it the ideal partner for our regulated customer base.

The Ask

We are applying for the **Google For Startups Cloud Program** to accelerate our growth trajectory. We seek cloud credits to fund GPU training infrastructure, first customer pilot training, technical architecture review, and access to Google's startup ecosystem for our Ecosummit Fall 2026 fundraising.

What Google Gets

A showcase customer demonstrating Google Cloud as the platform of choice for **EU AI Act compliant AI deployments** in regulated industries. Our hybrid architecture—training on GCP, inference on-premises—is a compelling reference architecture for enterprises navigating new AI regulations.

Under the DWS IQ 6 Partnership model, Lifetime offers Google Cloud:

- **Reference Case Studies:** Hybrid model training case studies in real-world **Fit for 55 / CSRD deployments** across logistics and construction.
- **Platform Hardening:** Hardening of an industry-level AI platform with a ‘compliance and security first’ mindset (**EU AI Act + GDPR**).
- **Thought Leadership:** Speaking engagements and joint thought leadership in EU industrial AI.
- **Customer Access:** Warm introductions and shared customer wins, mirroring our Acer hardware partnership model.

In return, we ask Google Cloud to commit to the following:

- **Fund Core Infrastructure:** Provide **$200,000 in Google Cloud credits** to rapidly deploy our 800B climate model and the DWS IQ 6 public cloud infrastructure, accelerating the roll-out of 16-industry regulated workloads on GCP.
- **Establish Reference Deployment: Designate DWS IQ 6** as a flagship, official reference deployment for both the **EU AI Act** and **Fit for 55** compliance in highly regulated industries.
- **Jointly Expand Market Share: Explore co-marketing and a joint go-to-market strategy** to capture the emerging demand for secure, EU-hosted industrial climate workloads.

Company Overview

Business Traction

Metric	Value
Monthly Recurring Revenue	**€7,000 MRR**
Customer Retention	**100%**
Current Valuation	**€3.8M post-money**
Business Angel Round	**€150K SAFE @ €3.8M**
VC Round (planned)	**€500K SAFE**
InvestEU Project Status	**INPO-20254383 ✓**
Founder Experience	15+ years cloud architecture, multi-cloud, AI/ML systems

Ecosystem Participation

Program	Status & Details
InvestEU	Official Project: Lifetime World, DWS IQ 6, Firehorse (INPO-20254383)
Peachscore	Cohort 25 — AI/Climate-tech startup scoring platform
Crunchbase	Active profile — investor discovery and due diligence
Ecosummit	Fall 2026 — Climate-tech investor summit pitch selected
ACER Partnership	Hardware partnership: 2× Veriton GN-100 + Nordic reseller rights

Current Customers

Customer	Industry	Use Case
Uber Taksi Helsinki	Logistics / Mobility	Fleet dispatch optimization
Bolt	Logistics / Mobility	Driver workflow automation
Kela	Public Sector / Healthcare	Medical transport coordination
NCC (pilot)	Construction (SEK 62B revenue)	BIM intelligence, cost optimization
T2H (pilot)	Construction	Project documentation AI

Product & Technology

DWS IQ 6 Platform

DWS IQ 6 is a multi-agent AI orchestration platform that enables enterprises to deploy industry-specific Agent Foundry and AI Agents assistants coordinated with Lifetime Scope Signals while maintaining full data sovereignty in their private network hub with ACER backend machines . The platform uses Model Context Protocol (MCP) and connectors for tool integration and supports both public cloud and on-premises private cloud deployment.

"Fit for 55 means Fit for 55. DWS IQ 6 is built for real outcomes, not minimum compliance forms. Our 800B-parameter, industry-winning climate model and regulation- specialized Firehorse Apps let large construction and industrial groups enforce stricter, future-proof Fit for 55 and CSRD standards across their entire value chain."

Risto Anton Päärni, Founder, CEO, Lifetime Oy.

Core Capabilities

- **Multi-Agent Orchestration:** Coordinate specialized AI agents for complex enterprise workflows
- **MCP Integration Hub:** Connect to enterprise tools via Model Context Protocol and specific connectors
- **Hybrid Deployment:** Train in cloud, deploy inference on-premises for data sovereignty
- **EU AI Act Compliance:** Built-in audit logging, human oversight, and data governance controls

Current Google Cloud Usage

GCP Service	Usage
Cloud Run	Production API endpoints, serverless inference
Secret Manager	API keys, credentials, configuration secrets
Cloud Storage	Model artifacts, training datasets, customer data (EU region)

Planned Google Cloud Expansion

GCP Service	Planned Usage
A3 GPU Instances	8×H100 clusters for model fine-tuning (construction domain)
Vertex AI	Model registry, experiment tracking, managed endpoints
BigQuery	Training data warehouse, analytics, ML feature store
GKE	Kubernetes orchestration for multi-tenant inference

Partnership Proposal: Google × Lifetime Oy

Following our successful hardware partnership model with ACER, we propose a similar value-exchange structure with Google For Startups. This partnership is designed to deliver mutual benefit through clear, measurable commitments.

Partnership Terms Overview

Component	Google Contribution	Lifetime Oy Contribution
Cloud Credits	**$200,000 credits**	—
Technical Support	Architecture review	—
Startup Network	Investor introductions	—
Marketing Content	—	**Case study + blogs**
Speaking	—	**Google Cloud Next**
Customer References	—	**NCC, Bolt, Kela intros**

Google Obligations

1. **Cloud Credits:** Provide $200,000 in Google Cloud credits over 24 months for GPU training, Vertex AI, and production infrastructure.
2. **Technical Architecture Review:** Session with Google Cloud AI/ML specialists to validate hybrid training/inference architecture for EU AI Act compliance.
3. **Startup Network Access:** Introductions to EU climate-tech investors via Google For Startups network ahead of Ecosummit Fall 2026.
4. **Partner Status:** Google Cloud Partner designation for co-marketing and customer referrals.

Lifetime Oy Obligations

1. **Case Study:** Co-authored technical case study on EU AI Act compliant AI deployment on Google Cloud within 6 months of program enrollment.
2. **Speaking Engagement:** Present at Google Cloud Next or regional event on hybrid cloud architecture for regulated industries.
3. **Technical Blogs:** Publish 2+ technical blog posts on Google Cloud blog about our Vertex AI + edge deployment architecture.
4. **Logo Rights:** Grant permission to use Lifetime Oy / DWS IQ 6 / InvestEU Project branding in Google Cloud marketing materials.
5. **Customer Introductions:** Facilitate introductions between Google Cloud sales and our enterprise customers (NCC, Bolt, Kela) for expansion opportunities.

Cloud Credits Request: Detailed Breakdown

Resource	12-Month Cost	Purpose
A3 GPU Training (H100 clusters)	$60,000	Model fine-tuning
First Customer Pilot Training (NCC)	**$100,000**	**Case study source**
Vertex AI (model registry, endpoints)	$15,000	MLOps
Cloud Run / GKE (production)	$12,000	Multi-tenant API
BigQuery + Cloud Storage	$8,000	Data warehouse
Contingency (10%)	*$5,000*	*Buffer*
TOTAL REQUEST	**$200,000 in cloud credits**	

First Customer Pilot: NCC Case Study

The $100,000 First Customer Pilot Training allocation funds a complete model training cycle for NCC (SEK 62B Nordic construction company). This pilot will:

- Train a domain-specific 8B → 70B construction AI model on Google Cloud A3 instances
- Deploy trained model to NCC's on-premises ACER Veriton GN-100 hardware
- Generate the co-authored case study demonstrating EU AI Act compliance on GCP
- Establish reference architecture for hybrid cloud-edge AI deployments

Value to Google: Direct access to NCC (and their suppliers/contractors) as a Google Cloud sales opportunity, plus a replicable case study for the €50B+ Nordic construction market.

Market Opportunity & Regulatory Advantage

Google can win EU AI Act Created Structural Moat using DWS IQ Partnership Model

The EU AI Act (effective August 2025) creates significant compliance requirements for AI systems in regulated industries. US-based competitors without EU-native infrastructure face substantial barriers to entry. Our position as an **InvestEU-backed, EU-domiciled company** with GDPR-compliant architecture provides a structural advantage.

The DWS IQ 6 platform converts this structural advantage into a **replicable sales opportunity** for Google Cloud, establishing GCP as the reference architecture for hybrid, EU AI Act-compliant AI deployments in regulated industries.

By partnering with the DWS IQ 6 project, Google Cloud can systematically win up to 20 structural moats in EU industrial AI – from EU AI Act-native infrastructure and Fit for 55 climate workloads to reference deployments in 16 regulated industries. Even capturing a subset of these moats creates a long-term advantage that US-based competitors without EU-native infrastructure cannot easily copy.

EU AI Act Article	Requirement	Our GCP Solution
Article 10	Data governance	GCP EU data residency + on-prem inference
Article 12	Record-keeping	Cloud Logging + BigQuery audit trail
Article 14	Human oversight	DWS IQ 6 approval workflows
Article 15	Accuracy & security	Air-gapped inference option

GCP Consumption Growth Projection

Timeline	Monthly Spend	Driver
Current	$500/mo	Cloud Run, Storage
Month 6	$8,000/mo	+ NCC pilot training, Vertex AI
Month 12	$15,000/mo	+ 3 enterprise customers on platform
Month 24	**$40,000/mo**	Scale-up + multi-tenant + post-Series A

Note: Each enterprise customer we onboard adds incremental GCP consumption. NCC alone represents potential $50,000+ annual cloud spend once fully deployed.

Implementation Timeline

Phase	Activities	Deliverables
Q1 2026	Architecture review, Vertex AI setup, 8B model training	Production environment, first model
Q2 2026	NCC pilot training ($100K), 70B model, case study draft	NCC deployment, blog #1
Q3 2026	**Ecosummit Fall 2026 pitch, Series A prep**	Case study published, blog #2
Q4 2026	Multi-tenant rollout, 5+ enterprise customers	Paid GCP consumption, speaking engagement
